

ALLERGEN FACT SHEET

FOR CONSULTANT USE ONLY

The Pure Romance products listed in the chart below contain one or more common allergens, including tree nut allergens. If your customer has any known allergies or any concern about an ingredient, recommend that they consult with their healthcare provider before using any Pure Romance product. All product ingredients can be found on the product label or online at pureromance.com.

Customers concerned about skin irritation or sensitivity should perform a skin-patch test. To perform a skin-patch test, dab a small amount of the product on the inside of the elbow or the back of the knee, then wait for 24 hours. Customers who know they have a specific allergy to an ingredient should avoid using products containing that ingredient.

COMMON ALLERGENS IN PURE ROMANCE PRODUCTS	Sweet Almond Oil	Argan Oil	Beeswax	Coconut Oil	Shea Butter	Soy	Lanolin	Latex

Serenity Honey Rose, Sugar Melon	X			X	X			
Shave District, Legend, Signature							X	
Tickle & Whip Black, Pink								X
Condoms								X

*All Pure Romance products are gluten free.

Is coconut considered a tree nut?

Coconuts are not tree nuts, but are plants of the palm family. However, nut bearing trees are distantly related to the palm species. In 2006, the FDA began to define coconut as a tree nut. It is stated that coconut rarely causes allergy, and out of the small number of cases where allergic reactions to coconut were documented, most occurred in people who were not allergic to other tree nuts. Ask your doctor if you should avoid coconut.

Is shea butter a known tree nut allergen?

No. However, shea butter is the fat derived from the nut oil of the shea tree and is therefore the by-product of tree nut oil. Research indicates that the reaction-causing protein is not detectable in shea butter. Ask your doctor if you should avoid shea butter or shea nut oil.
